ACADEMIC PROJECT(S)			
Financial Statement and Ratio Analysis.			
<ul style="list-style-type: none"> Objective: To compare BEL's financial performance to industry peers. Methodology: Analyzed BEL using financial ratios for profitability, liquidity, and solvency. Of the company. Outcome: BEL demonstrated strong financial health with a high PE ratio, indicating investor confidence, and a robust ROE. The company's zero leverage position further highlighted its financial strength and stability. 			
Financial Modelling on Maruti Suzuki			
<ul style="list-style-type: none"> DCF Approach: Determined the firm value and equity value using Discounted Cash Flow (DCF) method, utilizing company's past performance and forecasting future potential cash flows. Relative Approach: Performed a Relative Valuation using the EV/EBITDA multiple, estimating share price in relation to comparable companies existing in the same market. Outcome: Built detailed financial models for Maruti Suzuki, utilizing DCF and Relative Valuation methods in excel to determine firm and equity values 			
Active vs. Passive Investing			
<ul style="list-style-type: none"> Objective: To evaluate the net advantage of active management post-fees. Methodology: Compared historical returns of active fund replicas to the Nifty MID Cap 10 index. Outcome: Passive investment strategies have outperformed active investment strategies over the long term, primarily due to lower fees and the difficulty of consistently outperforming the market. 			
RFP PROJECT			
Impact of Credit Rating on Stock returns			
<ul style="list-style-type: none"> Objective: To determine impact of credit rating on firms' performance and stock return for NIFTY 500 Methodology: Compare stock returns one month before and after credit rating issuance, as well as overall returns of 2 months. Benchmark against Nifty returns to assess the impact of credit rating change. Outcome: Ongoing project
