ACADEMIC PROJECT(S)			
Understanding the financial standing of Apollo Tyres Ltd			
<ul style="list-style-type: none"> Understanding financial standing of Apollo Tyres– A comprehensive financial analysis was conducted using publicly available financial statements to assess the financial performance of Apollo within the same sector. Interpretation– The analysis includes a detailed interpretation of each financial ratio, providing insights into the financial implications for the company. 			
Creating Life Insurance Products for Gen Z			
<ul style="list-style-type: none"> Identified market barriers (product relevance, perceived value) hindering Gen Z's adoption of life insurance. Analysed Gen Z's expectations for product features, their preferences for service, trust, transparency, risk perception and aiming to align products with their unique outlook. Conducted data analysis using multivariate regression to uncover insights into Gen Z preferences. Based on the data, suggest product design changes, targeted marketing strategies, and improved customer service approaches that better align with Gen Z's needs and preferences. 			
Repay Smart: A Digital loan Management Platform			
<ul style="list-style-type: none"> Developed and presented "RepaySmart", a student loan management platform which will help borrowers in repayment once they start earning. A revolutionary platform that empowers individuals to take control of their finances and achieve their debt-free goals quickly and efficiently. Conducted comprehensive analysis including gap analysis, value creation, key costs, risks, rewards, customer journey, UI/UX flow, data points and verification, delivery to customers, post-delivery service or maintenance, and a marketing plan for customer acquisition. 			
Computation and interpretation of Value at Risk (VAR) for Stocks			
<ul style="list-style-type: none"> To compute and interpret VAR for a stock portfolio using both the percentile historical method and the variance covariance method. Processed and analyzed historical price data of various stocks over a multi-year period. Applied the percentile approach to estimate potential losses at specified confidence levels (e.g., 95th, 99th percentile). Utilized the variance-covariance method to calculate portfolio VAR, incorporating correlations between different stocks. Provided insights into risk exposure and potential losses under different market conditions.
